Tow Tractor

- Scooter control steering device enhances ergonomics and productivity
- CAN bus technology and high IP protection for main components
- Efficient energy management
- Available with Yale Robotics

Truck Dimensions

Performance - MO50T

How to read the diagram

Dashed line: The MO50T travels on level ground with a load of 3000kg. It requires approximately 965N tractive power for this and reaches approximately 8.5km/h.

Solid line: The MO50T is to travel up a 4% gradient with a load of 2000kg. It requires approximately 1930N tractive power for this and will reach approximately 6.1km/h.

Note: No continuous operation is possible for MO50T over 1000N.

The utilisation of braked trailers is recommended for up/down gradients of more than 4%.

Performance - MO70T

How to read the diagram

Dashed line: The MO70T travels on level ground with a load of 3000kg. It requires approximately 1000N tractive power for this and reaches approximately 11km/h.

Solid line: The MO70T is to travel up a 4% gradient with a load of 2000kg. It requires approximately 2100N tractive power for this and will reach approximately 8km/h.

Note: No continuous operation is possible for MO70T over 1336N.

The utilisation of braked trailers is recommended for up/down gradients of more than 4%.

⁽¹⁾ Available battery 465Ah. With battery 465Ah -145mm, and service weight -114kg

⁽²⁾ Available battery 500Ah. With battery 500Ah service weight -2kg

⁽³⁾ Applies to 2 pallets = 2400mm

⁽⁴⁾ Values obtained with 40 cycles

⁽⁵⁾ These values may vary of +/- 5%

⁽⁶⁾ With forks "CHEP long" e = 223mm, b₁₁ = 447mm

⁽⁷⁾ With drive wheel in tophane: 3200N

⁽⁸⁾ Transfer aisle widths (lines 4.34.1 & 4.34.2) are based on the VDI standard calculation as shown on illustration.

The British Industrial Truck Association recommends the addition of 100mm to the total clearance (dimension a) for extra operating margin at the rear of the truck.

All values are nominal values and they are subject to tolerances. For further information, please contact the manufacturer.

Tow Tractor

Designed for use in a wide range of manufacturing applications, particularly for line-feed operations

Productivity

- The powerful high thermal capacity 2.6kW or 3kW AC drive motor delivers high performance acceleration, braking and travel speed, making these models ideal for stop and go operations.
- Acceleration, travel and braking speeds can be adjusted by a service engineer to the particular needs of the application through the operator console
- Effortless electrical steering and automatic speed reduction on cornering ensure excellent control and high productivity
- The anti-roll back on ramps device ensures efficient operation
- A maximum travel speed of 13km/h reduces travel time on long runs between docking and picking areas
- Vertical or lateral battery extraction is available

Ergonomics

- Scooter control with electric steering reduces the arm movement required to change direction. This allows the operator to remain within the truck footprint at all times for protection as well as reducing operator fatigue and increasing productivity
- A personnel sensor, which covers the entire platform floor area detects when the operator is on board. This, together with the high, soft touch, back rest, allows the operator to locate the most comfortable operating position
- The large platform area increases operator comfort and allows easier pass through
- Slow-speed forward and reverse direction buttons (coasting function) are located on the backrest.

Cost of Ownership

- Adjustable performance settings allow the truck to be tailored to the needs of the application, reducing energy consumption
- Regenerative braking reduces the use of the service brake and dissipates heat from the traction motor increasing the life of key components
- Motors and controllers are protected against damage and debris, reducing servicing and repair costs

Dependability

- The solid frame construction and industrial grade components ensure long-term reliability and durability
- A sturdy wrap around bumper plate protects the truck against impacts and damage and minimises repair costs
- The truck's electronics - including the enclosed AC traction motor, sealed combi-controller (with IP65 rating), sealed electrical connectors and Hall effect sensors and switches - are all protected from damage to ensure excellent reliability, maximum productivity and reduced servicing costs
- Reduced wiring complexity is a result of the CANbus communication system, which also provides easy access to components and delivers world-class reliability

Serviceability

- The CANbus system and diagnostics can be controlled and monitored via the console or through the single plug-point. Fault codes can be displayed on the console for easy service identification
- A one-piece hood provides easy access to key components
- Full access to all the trucks main components, including the motor is, by the removal of the motor cover, which is retained by two easily removed screws

- The low maintenance AC traction motor with built in thermal protection is fully enclosed for protection against damage and debris, minimising service downtime

Available Options include:

- Side battery extraction
- Floor-level bumper (rubber bumper)
- Mid mounted bumper (bull bar)
- Universal support bar on motor compartment
- Several hook types
- Various drive wheel compounds, platform lift heights and storage compartments.

Robotics

This truck is available with Yale Robotics fitted. Our robotic solutions are based on the established Yale® manual truck range. This dual-mode design provides both flexibility of operation and simplicity of servicing, with our authorised dealer network already familiar with 90% of the mechanical and electrical systems of each robotic unit. For pre-sales support, warehouse systems specialists are available to visit potential sites to collect data and suggest solutions where required.
